Table des matières

1 Rappel sur le SQL – LDD/LMD **4**

2 Projection – Sélection – Agrégation **5**

Chapitre 1

Rappel sur le SQL – LDD/LMD

```sql
create table PROJET(
  NP varchar(4),
  nomP varchar(32),
  ne varchar(4),
  pbudget decimal(16),
  constraint pk_projet PRIMARY KEY(np),
  constraint fk_projet_ne FOREIGN KEY(ne) REFERENCES equipe(ne),
  constraint ck_projet_pbudget CHECK(ne >= 0)
);
```

```sql
update PROJET set pbudget = pbudget * 0.80;
update PROJET set pbudget = pbudget + 5000 where ne='e1';
```

```sql
delete from AFF where nc=(select nc from chercheur where nomc='Jean');
```

```sql
alter table EQUIPE ADD (
  np decimal(3),
  bt decimal(3),
  constraint ck_equipe_bt check(bt >= 0),
  constraint ck_equipe_np check(np >= 0)
);

update equipe e1 set np = (select count(*) from projets WHERE projets.ne=e1.ne),
          bt = (select sum(pbudget) from projets where projets.ne=e1.ne);
```

Chapitre 2

Projection – Sélection – Agrégation

1. $R = \Pi_{ne}\ equipe$ $R[ne]$

```
select distinct NE from equipe;
```

2. $R = \Pi_{nomP,\ pBudget}(\sigma_{Ne='e1'}\ equipe)$ $R[nomp,\ pbudget]$

```
select distinct nomp, pbudget from projet where ne='e1';
select distinct nomp, pbudget from (select * from projets where ne='e1');
```

3. $R = \Pi_{nomC,\ nc}(\sigma_{nomc\ like\ '\%a\%'}\ chercheur)$ $R[nomc]$

```
select distinct nomc from chercheur where nomC like '%a%';
select distinct nomc from (select * from chercheur where nomC like '%a%');
```

4. $R = \texttt{COUNT}(projet,\ ne,\ np)$ $R[ne,\ count(np)]$

```
select ne, count(np) as COUNT_NP from projet group by ne;
```

5. $R = \texttt{COUNT}(aff,\ np,\ nc)$ $R[np,\ count(nc)]$

```
select np, count(nc) as COUNT_NC from aff group by np;
```

6. $R = \texttt{SUM}(projet,\ ne,\ pBudget)$ $R[ne,\ count(pBudget)]$

```
select ne, sum(pBudget) as SUM_PBUDGET from projet group by ne;
```

7. $R = \texttt{COUNT}(aff,\ np,\ nc,\ count(nc) = 2)$ $R[np,\ count(nc)]$

```
select np, count(nc) as COUNT_NC from aff group by np having COUNT_NC = 2;
```
